

## Limit Receipt Page Refresh

When a Desktop or Central Receiver enters the receipt quantity to be accepted or rejected, the Receipt page will no longer automatically refresh. This change will allow the receiver to enter the packing slip number without the 'Packing slip must be populated' error message being displayed. If the user forgets to enter the packing slip and clicks 'Next', the 'Packing slip must be populated' error message is displayed. The error message is resolved once the user enters the packing slip number and clicks the 'Next' button.
